SERVICE BRIEF

Unified Threat Management

Protect your network with a single comprehensive security solution.

Proactive Network Security and Protection

Day or night, our UTM solution never sleeps.

How many programs does your network use to stay protected from the myriad of threats found online? It should only be one: a UTM, or Unified Threat Management solution. This comprehensive, all-in-one security tool automatically updates with the latest threat definitions to ensure maximum protection from all manners of online threats. Hackers always target businesses when they least expect it, so you need to beat them at their own game by taking proactive measures to keep them out of your business' network. With our UTM, viruses, malware, spyware, spam, and more, can all be things of the past.

The UTM is constantly updated to keep up with the latest threats, so you can know for certain that your network is as secure as it can be. DatCom, LLC's UTM platform is versatile and scalable, allowing you to change the amount of service and protection you receive to account for growth.

Restrict Web Traffic for Greater Productivity

View detailed web traffic reports and block time-wasting websites.

How much time do your employees waste on the Internet daily? The average user wastes about two hours of company time a day on the Internet for personal use. This adds up quickly, especially if you have a fair-sized staff. The UTM can block access to web content that's inappropriate for the workplace, like job search sites and social media. The UTM allows for content blocking on a per-user basis, so your marketing team can still take advantage of social media if needed.

A Secure Remote Support Solution

Let your remote employees access your network anywhere, anytime.

Many companies are hesitant to allow employees to work remotely because they think their network's integrity is it at risk. The UTM platform provides a secure connection even while mobile, allowing for safe remote access to your network when it's needed; like, for example, working from home. Our UTM's secure connection is perfect for expanding your business to new locations.

Email on the Fly, Protect Your Address

Prevent email spam with Email on the Fly.

You might think you're signing up for a great offer, but in reality you might be signing up for a flood of spam email. By using Email on the Fly, you can easily create a new email address that you can use for online surveys, downloadable deliverables, and just about any other online offer.
