

SERVICE BRIEF

Hardware Virtualization

Get the most out of your resources by consolidating your hardware.

Cost Savings Are Within Reach

Cloud technology makes managing your resources easier and more efficient.

With all information technology professionals searching for ways to help their organizations cut costs and improve efficiency, most professional institutions have started moving sections of their business computing to the cloud. By virtualizing your company's computing infrastructure, DatCom, LLC technicians are routinely able to substantially cut your enterprise's energy and maintenance costs. Our proficiency with our assessment, and virtualization, presents companies like yours with sustainable IT roadmaps that were never considered viable before.

Virtualization

The use of virtualized computer hardware presents a superior workflow for the money.

In most stand alone PCs, the computing resources are largely wasted. Combine all the machines your organization uses and that is a lot of computing waste. What if we told you that with DatCom, LLC's Hardware Virtualization services, you can host numerous computing environments allowing you to cut down on your energy and

maintenance costs?

At the core of this trend in efficient utility computing in the cloud is the virtual machine. By simulating a physical computer, and all of its computing capabilities, you can host numerous desktops on a single server, consolidating your computer infrastructure considerably.

At DatCom, LLC, we find solutions that will boost your organization's productivity. By virtualizing your data, your organization will see the benefits that consolidating your IT infrastructure can bring quickly, such as saving your organization money and centralizing your enterprise's computing infrastructure.

Flexible Hardware Simulation Solutions For Your Business

DatCom, LLC provides your organization with scalable virtualization options for your computing hardware.

Small and mid-sized businesses in East Texas that consider virtualizing their computing infrastructure have options. At DatCom, LLC, our technicians are versed in the industry best practices of supplying your organization with the most efficient and affordable computing infrastructure. We tailor a solution that will work best for your company. Some virtualization options include:

Full virtualization - Share a computer system among multiple users, isolate users on a system, and host emulation of new hardware to achieve superior reliability.

Partial virtualization - Easily implement fully-featured virtual machines to support specific software applications.

Paravirtualization - Increase performance with paravirtualized hardware.

Features

- Cut costs in energy expenditure and maintenance
- Consolidates your computing infrastructure from numerous resources to a single server
- Tailored solutions to best fit your company's needs, with options spanning from full to partial virtualization
- Solutions to help boost your organization's productivity
- Reduced computing resource waste
- New opportunities for your IT to take in its development

With many flexible options available, DatCom, LLC has a solution for any and all of your hardware virtualization needs. We can develop and implement a computing infrastructure that is both streamlined and comes equipped with superior functionality.
